Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-19 are rejected under 35 U.S.C. 103(a) as being obvious over Hasberg et al. (U.S. Patent No. 6,753,134).

Hasberg et al. discloses a process for the preparation of a radiation-sensitive silver halide emulsion comprised of high bromide cubical silver halide grains, the process comprising: (a) providing in a stirred reaction vessel a dispersing medium and high bromide silver halide seed grains, the seed grains comprising at least 5 mole % of the final emulsion silver, and (b) precipitating a silver halide shell which comprises at least 5 mole % of the final emulsion silver onto the seed grains to form high bromide cubical silver halide grains by introducing at least a silver salt solution into the dispersing medium at a rate such that the normalized shell molar addition rate, R_s , is above 1.0×10^{-2} , R_s satisfying the formula:

where M_s is the number of moles of silver halides added to the reaction vessel during the formation of the shell, t_s is the run time, in minutes, of the silver salt solution for the formation of the shell, and M_t is total moles of silver halide in the reaction vessel at the end of the precipitation of the shell; wherein the concentration of silver halide grains in the reaction vessel at the end of the precipitation of the shell is at least 0.5 mole/L

However, the temperature utilized in the reaction vessel of the process disclosed in Hasberg et al. is 40°C (see Examples therein), whereas the temperature in present invention is "at least 65°C" (claim 1, line 7). It would have been obvious to one of ordinary skill in the requisite art at the time the invention was made to vary the temperature of the reaction vessel to optimize the benefits of the inventive process.

The applied reference has a common inventor/assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(I)(1) and § 706.02(I)(2).

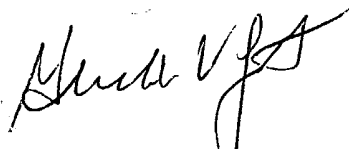

Prior Art

3. The following prior art made of record and not relied upon is considered pertinent to applicants' disclosure: U.S. Patent No. 4,914,014 and U.S. Patent No. 6,265,145.
